THE WONDERFUL HEATHS OR ERICAS

Like the Callunas, the Ericas herein listed are perfectly hardy evergreen dwarf shrubs of indispensable value in the rock garden. All the species and varieties are distinct either in habit of growth or in flower. They offer a good range of color and a long blooming season, extending from November right through the Winter and Spring months to the end of September. A section of these plants along with the Callunas and Daboecias is a glorious sight to behold. They all require an acid sandy leafmold soil in fairly good sun.
